System Data Process

DEVICE DATA is stored on the pipettes and in Gilson's software, so that we can continue improving our products and your experience.

EXPERIMENT DATA (protocols, reports) are stored on PipettePilot locally. Reports can be exported and shared across your internal systems as well as with our partner, SciNote, a web-based Electronic Lab Notebook.

YOUR PRIVACY is important to us. We have created features in our platform to ensure privacy and traceability of your data. A key component of this is Gilson's support for individual usernames and passwords.

GILSON has built a secure platform based on cloud and application industry best practices. Our team—and our partners—are focused to ensure best-in-class security.
